

Estimate vs. Actuals Analysis

The Presstimator can export to Microsoft Excel a complete analysis of a Quote's estimated values compared with the job's actual production results. Using the Actuals Tab, you can enter the actual press time, paper usage and other costs. Portions of this data may be imported from your press management system. The detailed analysis of Estimates vs. Actuals will provide you with data and charts that show how accurate your estimates are. This information is displayed in both graphical and numerical formats, utilizing multiple Worksheets within Excel. This spreadsheet report is based on a completely customizable Excel template.
